WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

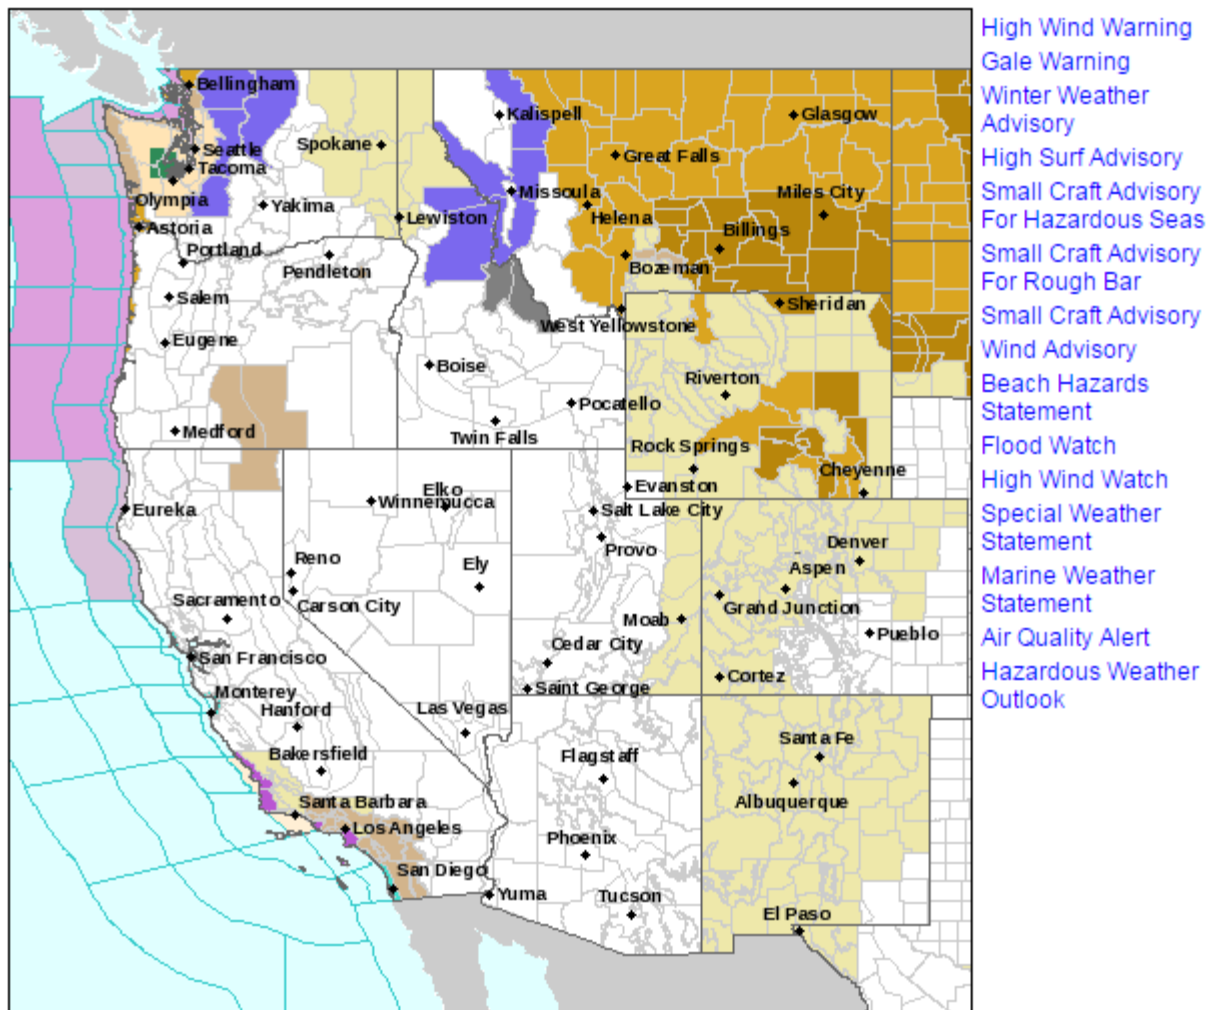

High pressure is over Northern California, but it will weaken a bit today as a frontal system moving through the Pacific Northwest dips into the northwestern and northern portion of Northern California. Light rain showers are possible northwest of a line from Ukiah to Whiskeytown Lake to Mt Shasta late today into early Saturday. The remainder of Northern California will be partly to mostly cloudy and mild today and early Saturday. By late Saturday the high pressure will build back and produce sunny and warm conditions with light northwest to northeast winds. The high will further strengthen back over Northern California Sunday through the middle of next week and produce dry and warmer weather with mostly clear skies. Temperatures will rise to 10-15 degrees above normal and north to east winds will gust to 25-35 mph from the western Sierra slopes to the coast into the middle of next week with this pattern. Computer forecast models are currently inconsistent regarding the potential of wet unsettled weather returning late next week.

SOUTHERN CALIFORNIA

Strong surface high pressure over the Great Basin will bring offshore winds of mainly 15 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of Southern California through early next week. The strongest winds will occur Sunday night through early Monday afternoon when offshore winds will increase to 20 to 40 mph with gusts to 60 mph. Significant warming and very low humidity will take place through Tuesday as a strong ridge of high pressure aloft builds into the West Coast from the Pacific. Maximum temperatures will be in the upper 40s and 50s across the mountains and mid 60s to mid 70s in the valleys today. The warmest valley locations of Southern California may reach 90 degrees on Tuesday when temperatures will peak. Minimum humidity will be mainly between 12% and 25% away from the Central Valley today and then drop into the single digits and teens Saturday through early next week. The ridge aloft will weaken causing a slow cooling trend Wednesday through the end of next week. Winds will become light across the region Tuesday night through the end of next week.
